

Report: Analysis of Web-based Systems – Project 2

Authors:

- Adam Ćwikliński, No. 273055
- Jakub Kamiński, No. 273107

1. Introduction and Project Objective

The aim of this project is to analyze user behavior and the purchasing process for the **Google Merchandise Store** (<https://shop.merch.google/>) using a Google Analytics demo account. The analysis focuses on understanding customer acquisition, engagement, and the final conversion path.

2. Analysis Methodology

The data used for this report covers the following periods:

- a) Full Day Analysis: [17.04.2026 r.].
- b) Hourly Analysis: [4:00 PM - 5:00 PM UTC].

a) Full Day Analysis: [17.04.2026 r.].

Customer Acquisition Analysis

Detailed Geographic Revenue & Engagement Analysis

This analysis identifies the primary geographic markets and their efficiency in progressing through the final checkout stages.

Kraj	↓	Aktywni uzytkownicy	Nowi uzytkownicy	Sesje z zaangażowaniem	Współczynnik zaangażowania	Liczba zdarzeń	Najważniejsze wydarzenia	Współczynnik kluczowych zdarzeń związanych z użytkowaniem	Łączne przychody
Łącznie		3 184	2 518	1 327	35,72%	44 921	3 064	20,41%	8 971,83 \$
1 (not set)		1 514	1 514	2	0,13%	4 582	0	0%	0,00 \$
2 United States		886	521	804	68,31%	26 138	2 114	47,52%	8 845,35 \$
3 India		202	154	146	64,32%	2 462	99	23,76%	0,00 \$
4 Canada		76	27	45	45,92%	1 316	57	32,89%	0,00 \$
5 Taiwan		66	35	57	67,06%	2 265	267	45,45%	126,48 \$
6 Colombia		60	29	22	24,72%	853	29	15%	0,00 \$
7 South Korea		46	13	39	46,99%	1 691	150	52,17%	0,00 \$
8 Mexico		38	30	36	69,23%	949	80	55,26%	0,00 \$
9 Japan		36	28	27	60%	879	67	47,22%	0,00 \$
10 Singapore		33	27	15	39,47%	289	9	18,18%	0,00 \$

Key Observations:

- **Market Leadership:** The **United States** is the absolute leader in revenue, generating **\$8,845.35**, which constitutes over **98.5%** of the total revenue recorded in this view.
- **Active User Base:** While the total number of active users is **3,184**, nearly half (**1,514**) are categorized as **(not set)**, indicating users whose location could not be identified.
- **High-Quality Engagement:** Users from the **United States** exhibit a high engagement rate of **68.31%** and a significant key event rate of **47.52%**.
- **Emerging Revenue:** **Taiwan** is the only other identified market with recorded revenue, contributing **\$126.48** despite having a relatively small base of **66 active users**.
- **Global Traffic vs. Sales:** Countries like **India (202 users)** and **Canada (76 users)** show active engagement with the store (over 45% engagement rate) but did not complete any transactions during this specific period.
- **Interaction Intensity:** The **United States** generated the vast majority of site interactions with **26,138 events** and **2,114 key events**.

Technology Performance Analysis

This section evaluates the effectiveness of different device categories—**Mobile, Desktop, and Tablet**—based on user engagement and revenue generation.

Karta 3							
Kategoria urządzenia	↓ Aktywni użytkownicy	Nowi użytkownicy	Sesje z zaangażowaniem	Współczynnik zaangażowania	Liczba zdarzeń	Najważniejsze wydarzenia	Łączne przychody
Łącznie	3 184	2 518	1 327	35,72%	44 921	3 064	8 971,83 \$
1 mobile	1 980	1 898	408	19,54%	13 845	739	5 319,01 \$
2 desktop	1 195	612	914	56,91%	30 954	2 315	3 652,82 \$
3 tablet	11	8	6	46,15%	122	10	0,00 \$

Key Observations:

- **Traffic Volume: Mobile** is the leading device category in terms of reach, attracting **1,980 active users** and **1,898 new users**.
- **Engagement Quality: Desktop** users demonstrate significantly higher engagement quality, with a **56.91% engagement rate** compared to only **19.54%** for mobile users.
- **Revenue Distribution:** Despite having lower traffic volume, **Mobile** devices generated the highest total revenue of **\$5,319.01**, while **Desktop** contributed **\$3,652.82**.
- **Conversion Power: Desktop** users were more active in completing key actions, generating **2,315 key events** from **30,954 total events**, whereas mobile users generated **739 key events** from **13,845 total events**.
- **Tablet Performance: Tablets** represent a minor segment with only **11 active users** and **\$0.00 revenue**, though they maintain a respectable engagement rate of **46.15%**.

Browsers: Analysis of the most popular Browsers used by customers.

This section examines the distribution of traffic and revenue across different web browsers used by customers. The data highlights technical preferences and reveals which platforms contribute most effectively to the store's financial performance.

Przeglądarka	↓ Aktywni użytkownicy	Nowi użytkownicy	Sesje z zaangażowaniem	Współczynnik zaangażowania	Liczba zdarzeń	Najważniejsze wydarzenia	Łączne przychody
Łącznie	3 184	2 518	1 327	35,72%	44 921	3 064	8 971,83 \$
1 Chrome	2 867	2 305	1 132	33,84%	36 599	2 702	8 835,08 \$
2 Safari	183	149	134	57,76%	3 385	270	81,95 \$
3 Edge	100	43	43	34,4%	1 382	72	54,80 \$
4 Firefox	13	8	8	61,54%	160	9	0,00 \$
5 Android Webview	9	2	1	11,11%	46	5	0,00 \$
6 Samsung Internet	6	5	6	75%	83	2	0,00 \$
7 Safari (in-app)	4	4	2	50%	32	4	0,00 \$
8 Opera	2	1	2	28,57%	24	0	0,00 \$
9 Mozilla Compatible Agent	1	1	0	0%	4	0	0,00 \$
10 (not set)	0	0	0	0%	3 206	0	0,00 \$

Key Observations:

- **Browser Dominance:** **Chrome** is the primary browser, accounting for **88.4%** of active users (**2,867**) and **98.5%** of total revenue (**\$8,835.08**).
- **Revenue Leaders:** Only three browsers generated revenue: **Chrome** (\$8,835.08), **Safari** (\$81.95), and **Edge** (\$54.80).
- **Engagement Quality:** Although **Samsung Internet** has very few users (**6**), it shows the highest engagement rate at **75%**, followed by **Firefox** at **61.54%**.
- **Volume vs. Conversion:** Browsers like **Firefox** and **Opera** show zero revenue despite recorded active sessions, indicating a focus on desktop Chrome for actual purchasing power.

Operating Systems

This section evaluates the performance of the Google Merchandise Store across various operating systems. The data identifies which platforms drive the highest user volume and which segments are most effective in terms of revenue and engagement.

System operacyjny	↓ Aktywni użytkownicy	Nowi użytkownicy	Sesje z zaangażowaniem	Współczynnik zaangażowania	Liczba zdarzeń	Najważniejsze wydarzenia	Łączne przychody
Łącznie	3 184	2 518	1 327	35,72%	44 921	3 064	8 971,83 \$
1 Android	1 786	1 736	244	13,35%	9 621	361	5 237,06 \$
2 Windows	485	250	277	43,01%	7 327	414	142,35 \$
3 Macintosh	483	240	433	66,82%	13 727	1 246	1 439,04 \$
4 iOS	205	170	169	61,9%	4 346	388	81,95 \$
5 Chrome OS	165	75	175	70,28%	5 451	567	2 071,43 \$
6 Linux	32	17	30	78,95%	1 120	88	0,00 \$
7 (not set)	30	30	0	0%	3 326	0	0,00 \$
8 UNIX	1	0	0	0%	3	0	0,00 \$

Key Observations:

- **Top Traffic Source: Android** is the most widely used system with **1,786 active users**.
- **Revenue Leader: Android** also generated the highest revenue, contributing **\$5,237.06** (approx. 58% of total).
- **High-Value Segments: Chrome OS** (\$2,071.43) and **Macintosh** (\$1,439.04) represent significant high-value traffic despite having fewer users than Windows.
- **Engagement Efficiency: Linux** shows the highest engagement rate at **78.95%**, but generated **\$0.00** in revenue.
- **Active Events: Macintosh** users were the most active per capita, generating **13,727 events** and **1,246 key events** despite having only **483 users**.

Traffic Acquisition Analysis

This table presents the distribution of users across different traffic acquisition channels in the Google Merchandise Store.

The analysis evaluates how users entered the store and compares the effectiveness and engagement quality of different traffic sources.

Nowy użytkownik – główna grupa kanałów (Domyślna grupa kanałów)	↓	Całkowita liczba użytkowników	Nowi użytkownicy	Powracający użytkownicy	Liczba zdarzeń	Najważniejsze wydarzenia	Współczynnik kluczowych zdarzeń związanych z użytkownikiem
Łącznie		4 897	2 518	614	44 921	3 064	20,41%
1 Direct		3 397	1 839	366	26 672	1 772	13,66%
2 Organic Search		711	368	106	8 605	641	36,45%
3 Cross-network		347	110	42	4 307	343	54,35%
4 Paid Search		210	137	42	2 495	101	23,65%
5 Referral		114	20	28	1 581	106	46,67%
6 Unassigned		36	17	7	375	20	37,5%
7 Organic Social		33	7	8	291	24	46,67%
8 Email		26	1	12	269	14	53,85%
9 Organic Shopping		25	18	3	320	43	88,89%
10 Organic Video		1	1	0	6	0	0%

Key Observations:

- **Direct traffic** was the dominant acquisition channel, accounting for approximately **69% of all users** (3,397 users).
However, despite the high traffic volume, the average engagement time was relatively low (**38 seconds**).
- **Organic Search** generated **711 users** and demonstrated significantly better engagement quality, with an average engagement time of **1 minute 18 seconds**.

- **Cross-network traffic** showed one of the strongest engagement performances, achieving an average engagement time of **2 minutes 1 second**, despite contributing a smaller number of users.
- **Paid Search** accounted for only **4.29% of total users** (210 users), but users arriving through advertisements showed relatively high engagement and purchase intent.
- **Referral traffic** achieved the highest average engagement time (**2 minutes 44 seconds**), suggesting that users coming from external websites were highly interested in the store content.
- The analysis also highlights the presence of **returning users**, which may indicate customer retention and repeated interaction with the ecommerce platform.

Customer Engagement Analysis & Site structure

Here is the technical analysis of the website content performance. This section covers the **"Pages with the highest number of views"** requirement.

☐	10 YouTube Google Merch Shop	163 (1,39%)	90 (2,83%)	1,81	29 s	797 (1,77%)			

Key Observations:

- **Total Volume:** The website recorded a total of **11,699 views** and **44,921 events** across all pages.
- **Most Viewed Page:** The **Home** page is the primary entry point, accounting for **3,256 views** (27.83%) and the highest number of active users (**2,667**).
- **Top Product Categories:** The **Google Merch Shop** main landing page (**785 views**) and the **"New"** category (**740 views**) are the most popular sections after the homepage.
- **Highest Engagement Time:** The **Men's / Unisex** section shows the deepest engagement, with an average engagement time of **1 minute 00 seconds** per user.
- **Event Activity:** The **Home** page also generated the most interactions, totaling **10,675 events** (23.76% of total site activity).

User Path Exploration Analysis

This analysis tracks the specific steps users take upon entering the store to understand navigation patterns and interest levels.

Wszyscy użytkownicy

Key Observations:

- **Starting Point:** The analyzed journey begins with **3,395 session_start** events.
- **Step +1 (Immediate Engagement):** A high retention rate is observed, with **3,115 users** (over 91%) proceeding directly to a **page_view**.
- **Step +2 (Navigation Hubs):** The **Home** page acts as the primary secondary destination for identified users (**400 views**), while a significant segment remains in a **(not set)** state (**755 views**), indicating unlinked page titles or background events.

- **Interest Diversification:** Users branch out into various categories, with the **Google Merch Shop** landing page (**52**) and the **New** category (**40**) being the most popular specific destinations after the homepage.
- **Drop-off Point:** The visualization shows a steep decline in volume as users move deeper into specific product sub-categories, such as **Drinkware** (**13**) or specific **sets** (**5**), suggesting a wide but shallow browsing behavior.

Key Takeaway: While top-of-funnel engagement is strong, the conversion to the checkout phase is extremely low.

Active Users

This table presents the number of active users across the most visited pages in the Google Merchandise Store.

It also includes page views, event activity, and generated revenue, allowing the evaluation of user engagement and page popularity.

Ścieżka strony i klasa ekranu	Wyświetlenia	↓ Aktywni użytkownicy	Liczba zdarzeń	Najważniejsze wydarzenia	Łączne przychody
Łącznie	11 699	3 184	44 921	3 064	8 971,83 \$
1 /	3 160	2 631	10 541	0	0,00 \$
2 (not set)	0	1 000	4 662	0	0,00 \$
3 /shop/new	676	359	3 348	2	0,00 \$
4 /shop/apparel/mens	493	236	2 492	0	0,00 \$
5 /shop/clearance	368	204	1 417	0	0,00 \$
6 /shop/lifestyle/bags	250	171	1 070	0	0,00 \$
7 /shop/lifestyle/fun-and-games	245	168	763	0	0,00 \$
8 /shop/apparel	277	159	1 498	0	0,00 \$
9 /shop/lifestyle/drinkware	201	137	895	0	0,00 \$
10 /search	285	124	635	0	0,00 \$

Key Observations:

- The homepage (/) attracted the highest number of active users (**2,631 users**) and generated the largest number of events (**10,541 events**).
- The **/shop/new** page was the second most active page, indicating strong interest in new products.
- Product category pages such as:
 - **/shop/apparel/mens**
 - **/shop/clearance**
 - **/shop/lifestyle/bags**

showed relatively high user engagement and browsing activity.

- The **/search** page generated fewer active users, but still produced a significant number of events, suggesting active product searching behavior.
- Most category and browsing pages generated little or no direct revenue, as their primary purpose is product exploration rather than direct purchasing.

Number of events

This table presents the number of events generated across the most visited pages in the Google Merchandise Store.

The analysis evaluates user interaction intensity and overall engagement on different pages within the ecommerce platform.

Ścieżka strony i klasa ekranu	Wyświetlenia	Aktywni użytkownicy	↓ Liczba zdarzeń	Najważniejsze wydarzenia	Łączne przychody
Łącznie	11 699	3 184	44 921	3 064	8 971,83 \$
1 /	3 160	2 631	10 541	0	0,00 \$
2 (not set)	0	1 000	4 662	0	0,00 \$
3 /shop/new	676	359	3 348	2	0,00 \$
4 /shop/apparel/mens	493	236	2 492	0	0,00 \$
5 /shop/apparel	277	159	1 498	0	0,00 \$
6 /shop/clearance	368	204	1 417	0	0,00 \$
7 /checkout	444	118	1 188	37	8 971,83 \$
8 /shop/lifestyle/bags	250	171	1 070	0	0,00 \$
9 /shop/lifestyle/drinkware	201	137	895	0	0,00 \$
10 /shop/shop-by-brand/youtube	163	90	799	0	0,00 \$

Key Observations:

- The homepage (/) generated the highest number of events (**10,541 events**), confirming that it is the main interaction point within the store.
- The **/shop/new** page generated over **3,300 events**, indicating strong user interest in newly available products.
- Product category pages such as:
 - **/shop/apparel/mens**
 - **/shop/clearance**
 - **/shop/apparel**

Also produced large numbers of events, showing high browsing activity and customer interaction.

- The **/checkout** page generated fewer overall events compared to browsing pages, but it produced the highest business value by generating all recorded revenue and key purchase events.

Engagement Time

This table presents pages with the highest average engagement time in the Google Merchandise Store.

The analysis evaluates how long users interacted with specific pages and how engagement

Key Observations:

- The page
/product/youtube-crossbody-phone-lanyard-ggoeycbb219599
achieved the highest average engagement time (**5 minutes 34 seconds**), indicating very strong user interest in the product content despite low traffic volume.
- Several niche pages such as:
 - /canada/shop/shop-by-brand**
 - /shop/gift-cards**
 - /canada/shop/shop/lifestyle**

also demonstrated high engagement times, suggesting focused browsing behavior among a smaller number of users.

- The **/checkout** page generated the highest business value, producing:
 - 37 key events**
 - nearly **\$8,972 revenue**

while maintaining a high engagement time of **1 minute 39 seconds**.

- Some pages generated high engagement despite very small numbers of users, indicating that users who reached these pages were highly interested and actively interacting with the content.
- The analysis shows that pages with the highest engagement time are not necessarily the pages with the highest traffic volume.

Revenue for the whole day:

The following table illustrates the sales performance of specific items, primarily ranked by the total revenue each product generated. This breakdown highlights which products are the most significant financial drivers for the store and identifies trends in high-volume purchasing behavior.

Summary of Sales and Engagement Analysis (April 17, 2026)

Key Observations:

- The analysis for the selected period shows a total product revenue of **\$7,460.76** from **749 items purchased**.
- **Highest Revenue Products:** The **Google Inspired Blue Notebook** and **Google Inspired Red Notebook** are the top revenue generators, each bringing in **\$1,280.00** (17.16% of total revenue each).
- **Most Frequently Purchased:** Both the **Blue and Red Inspired Notebooks** were the most frequently purchased items, with **200 units sold** for each product.

- **Customer Engagement Insight:** There is a significant gap between product views and purchases for top items. For instance, the **Google Inspired Red Notebook** had only **2 views** but resulted in **200 purchases**, suggesting customers are adding these items to their carts directly from category pages or promotional links without visiting individual product pages.

Product Interest & Visibility

This table categorizes products based on their visibility, specifically sorting them by the total number of views each item received. It provides insight into which products attract the most initial interest and how that translates into cart additions and final sales.

Łącznie Google Recycled Black Hoodie Google Super G Spectra Tumbler Nano Banana Sweatshirt Google Conductor Bottle Google Timbuk2 Tuck Backpack

☒	4 Google Conductor Bottle	48 (1,84%)	97 (6,27%)	30 (4,01%)	504,00 \$ (6,76%)	
☒	5 Google Timbuk2 Tuck Backpack	47 (1,8%)	2 (0,13%)	0 (0%)	0,00 \$ (0%)	
☐	6 Google Eco Tee White	39 (1,5%)	15 (0,97%)	3 (0,4%)	67,20 \$ (0,9%)	
☐	7 Gemini Eco Black Tee	38 (1,46%)	1 (0,06%)	0 (0%)	0,00 \$ (0%)	
☐	8 Google Eco Tee Black	37 (1,42%)	14 (0,9%)	0 (0%)	0,00 \$ (0%)	
☐	9 Google Hakone Quilted Jacket	35 (1,34%)	3 (0,19%)	0 (0%)	0,00 \$ (0%)	
☐	10 Google Seashell French Terry Pullover	35 (1,34%)	1 (0,06%)	1 (0,13%)	44,00 \$ (0,59%)	

- **Google Recycled Black Hoodie** was the most viewed product (**67 views**) and generated **\$255 revenue** from **4 purchases**.
- **Google Conductor Bottle** achieved the strongest sales performance:
 - **Only 48 views (in that day)**
 - **97 add-to-cart events**
 - **30 purchases**
 - **over \$504 revenue**

making it the best-performing product in the analyzed dataset.

- Several products generated high numbers of views but resulted in little or no revenue, indicating weak purchase conversion despite customer interest.

- **Google Timbuk2 Tuck Backpack** received **47 product views**, but generated **0 purchases** and no revenue.
- Products such as:
 - **Google Eco Tee White**
 - **Google Seashell French Terry Pullover**

generated moderate revenue despite relatively smaller traffic volumes.

- The analysis demonstrates that high product visibility does not always lead to high purchase conversion or revenue generation.

Purchase funnel

This funnel presents the progression of users through the ecommerce purchasing process in the Google Merchandise Store.

The analysis illustrates how users move from entering the website to completing a purchase and identifies the main drop-off points within the sales funnel.

Key observations:

- The funnel began with approximately **2,955 session starts**, representing all users entering the store.
- The largest drop-off occurred between:
 - **Session Start**
 - and **Product View**

where over **80% of users left the journey before viewing a product.**

- Only **19.8%** of users progressed from entering the website to viewing a product page.
- Approximately **24.1%** of users who viewed products added items to the cart, indicating relatively strong purchase intent among engaged users.
- Nearly **49.6%** of users who added products to the cart proceeded to the checkout process.
- The final checkout-to-purchase conversion rate reached **42.9%**, suggesting that users who reached the checkout stage were highly likely to complete a purchase.

Customer retention

Data Limitation: Due to the analysis being focused on a single-day snapshot (April 17, 2026), long-term retention trends and cohort behaviors cannot be fully established.

Conclusions

The conducted analysis of the Google Merchandise Store using Google Analytics provided valuable insights into customer behavior, traffic acquisition, engagement quality, and the overall ecommerce purchasing process.

The results showed that the store attracted a large volume of users, primarily through Direct traffic and mobile devices. However, high traffic volume did not always translate into effective purchase conversion. Organic Search, Referral, and Cross-network traffic sources generated significantly better engagement quality and stronger purchase intent despite lower user counts.

The purchase funnel analysis revealed that the largest user drop-off occurred during the early stage of the customer journey, specifically between session start and product view. More than 80% of users abandoned the website before interacting with product pages. On the other hand, users who reached the checkout phase demonstrated relatively high purchase intent and strong final conversion rates.

The analysis also highlighted important behavioral differences between technologies and devices. Desktop users generated the majority of purchases, while mobile devices produced the largest amount of traffic but very low conversion efficiency. Chrome remained the dominant browser in terms of traffic, engagement, and generated revenue.

Product analysis demonstrated that product popularity and revenue generation are not always directly related. Some products achieved high visibility but weak conversion, while others generated strong revenue despite relatively low view counts. This indicates that customer purchase behavior is strongly influenced by factors such as product intent, navigation patterns, and promotional visibility.

Overall, the project demonstrated how Google Analytics can be used to analyze customer acquisition, customer engagement, revenue generation, and user purchasing behavior within an ecommerce environment. The performed analysis may support future optimization of marketing strategies, website structure, and conversion efficiency.

b) Hourly Analysis: [4:00 PM - 5:00 PM UTC].

Customer Acquisition Analysis

Geographic Analysis of the Purchase Journey

This analysis identifies the primary geographic markets and their efficiency in progressing through the final checkout stages.

Kraj	↓ Aktywni uzytkownicy	Nowi uzytkownicy	Sesje z zaangażowaniem	Współczynnik zaangażowania	Liczba zdarzeń	Najważniejsze wydarzenia	Współczynnik kluczowych zdarzeń związanych z użytkownikiem	Łączne przychody
Łącznie	115	82	27	23,28%	947	56	14,78%	0,00 \$
1 (not set)	60	60	0	0%	180	0	0%	0,00 \$
2 United States	33	14	18	52,94%	341	18	30,3%	0,00 \$
3 India	5	3	2	40%	44	1	20%	0,00 \$
4 South Korea	5	1	3	60%	127	11	20%	0,00 \$
5 Canada	3	1	1	33,33%	13	2	66,67%	0,00 \$
6 Indonesia	2	1	1	50%	43	3	50%	0,00 \$
7 Australia	1	1	0	0%	5	0	0%	0,00 \$
8 Brazil	1	1	1	100%	17	0	0%	0,00 \$
9 Colombia	1	0	0	0%	5	0	0%	0,00 \$
10 Hong Kong	1	0	0	0%	2	0	0%	0,00 \$

Key observations

- The **United States** dominated the analyzed hourly period, generating:
 - **33 active users**
 - **18 engaged sessions**
 - **341 events**
 - and the highest number of key events (**18**).
- Users from the United States also achieved a relatively high engagement rate (**52.94%**), confirming strong user activity during the selected hour.
- **South Korea** demonstrated the highest engagement quality among larger traffic groups, reaching a **60% engagement rate** and generating **11 key events** despite only **5 active users**.
- **Canada** achieved the highest key-event conversion efficiency (**66.67%**), indicating very strong interaction quality from a small user group.
- Several countries such as:

- Australia
- Colombia
- Hong Kong

generated little or no meaningful engagement during the analyzed timeframe.

- Despite measurable activity and event generation, no revenue was recorded during this specific hourly interval.

Technologies Used

Device Performance Analysis

This section evaluates how different device categories—**Mobile** and **Desktop**—impacted user engagement and financial performance during the analyzed hour.

Kategoria urządzenia	↓ Aktywni użytkownicy	Nowi użytkownicy	Sesje z zaangażowaniem	Współczynnik zaangażowania	Liczba zdarzeń	Najważniejsze wydarzenia	Łączne przychody
Łącznie	142	100	38	25,5%	1 772	152	68,39 \$
1 mobile	87	77	13	14,77%	667	41	0,00 \$
2 desktop	55	23	25	40,98%	1 105	111	68,39 \$

Key observations

- **Traffic Volume:** **Mobile** devices were the primary source of traffic, with **87 active users** compared to **55** on **Desktop**.
- **Engagement Quality:** **Desktop** users demonstrated significantly higher engagement quality, with a **40.98% engagement rate**, while mobile users recorded only **14.77%**.
- **Revenue Generation:** Despite having lower traffic, **Desktop** users were responsible for all recorded revenue (**\$68.39**) during this window.
- **Interaction Intensity:** **Desktop** sessions were more productive, generating **111 key events** and **1,105 total events**, whereas mobile sessions resulted in **41 key events** and **667 total events**.

The data suggests that while the store attracts more users via mobile, the actual purchasing power and deep engagement are driven almost exclusively by desktop users.

Browsers: Analysis of the most popular Browsers used by customers.

This section analyzes browser performance during a specific hour, identifying which platforms drive user activity and revenue in a short-term window.

Przeglądarka	↓ Aktywni użytkownicy	Nowi użytkownicy	Sesje z zaangażowaniem	Współczynnik zaangażowania	Liczba zdarzeń	Najważniejsze wydarzenia	Łączne przychody
Łącznie	142	100	38	25.5%	1 772	152	68.39 \$
1 Chrome	133	95	35	25%	1 679	144	68.39 \$
2 Safari	6	3	3	50%	79	8	0.00 \$
3 Edge	2	1	0	0%	11	0	0.00 \$
4 Safari (in-app)	1	1	0	0%	3	0	0.00 \$

Key observations:

- **Chrome** was the dominant browser, accounting for:
 - **133 active users**
 - **1,679 events**
 - **144 key events**
 - and all generated revenue (**\$68.39**).
- Chrome also represented the vast majority of new users (**95 users**) and engaged sessions (**35 sessions**), confirming its dominance across all activity metrics.
- **Safari** had a relatively small user base (**6 users**) but achieved the highest engagement rate (**50%**), suggesting stronger interaction quality among Safari users.
- **Edge** and **Safari (in-app)** generated very low activity levels and produced no recorded revenue during the analyzed timeframe.

The analysis demonstrates that browser popularity strongly influenced overall interaction volume and ecommerce activity within the platform.

User Systems Performance

System operacyjny	↓ Aktywni użytkownicy	Nowi użytkownicy	Sesje z zaangażowaniem	Współczynnik zaangażowania	Liczba zdarzeń	Najważniejsze wydarzenia	Łączne przychody
Łącznie	142	100	38	25.5%	1 772	152	68.39 \$
1 Android	72	69	5	6.85%	307	7	0.00 \$
2 Macintosh	26	6	16	53.33%	759	98	68.39 \$
3 Windows	19	9	4	20%	132	2	0.00 \$
4 iOS	15	8	8	53.33%	360	34	0.00 \$
5 Chrome OS	5	3	4	66.67%	89	5	0.00 \$
6 (not set)	4	4	0	0%	16	0	0.00 \$
7 Linux	1	1	1	100%	109	6	0.00 \$

Key observations

- **Android** was the most widely used operating system, generating:

- **72 active users**
- **69 new users**
- and **307 events**.
- Despite generating the highest traffic volume, Android showed relatively weak engagement performance with only:
 - **5 engaged sessions**
 - and a low engagement rate of **6.85%**.
- **Macintosh** demonstrated the strongest business performance:
 - **759 events**
 - **98 key events**
 - and all recorded revenue (**\$68.39**).
- **iOS** achieved strong engagement quality, reaching:
 - **53.33% engagement rate**
 - and **34 key events** despite a relatively small user base.
- **Chrome OS** also demonstrated high engagement efficiency with a **66.67% engagement rate**.
- **Linux** showed the highest engagement rate (**100%**), although it represented only a single active user and therefore has limited statistical significance.
- Windows generated moderate activity levels but produced no recorded revenue during the analyzed period.

Traffic Acquisition Analysis

This section identifies the specific sources that drove users to the store, helping to distinguish between those who entered directly, via search engines, or through advertisements. By analyzing these channels, we can determine which traffic sources attract the most engaged visitors and potential customers.

Nowy użytkownik - główna grupa kanałów (Domyślna grupa kanałów)		Całkowita liczba użytkowników	Nowi użytkownicy	Powracający użytkownicy	Liczba zdarzeń	Najważniejsze wydarzenia	Współczynnik kluczowych zdarzeń związanych z użytkownikiem
Łącznie		148	100	31	1 772	152	16,2%
1	Direct	111	78	20	910	50	11,11%
2	Organic Search	22	16	4	532	72	20%
3	Cross-network	7	3	3	170	17	42,86%
4	Paid Search	4	2	1	18	1	33,33%
5	Referral	3	0	3	112	9	66,67%
6	Organic Social	1	1	0	30	3	100%

Key observations

- **Direct traffic** dominated the analyzed period, generating:
 - **111 total users**
 - **78 new users**
 - and **910 events**.
- Despite its high traffic volume, Direct traffic achieved a relatively low key-event conversion rate (**11.11%**) compared to other acquisition channels.
- **Organic Search** demonstrated significantly stronger engagement quality:
 - **532 events**
 - **72 key events**
 - and a **20% key-event conversion rate**.
- **Cross-network traffic** showed strong conversion efficiency with a **42.86% key-event rate**, despite a relatively small number of users.
- **Referral traffic** achieved one of the highest performance indicators, reaching a **66.67% key-event conversion rate**, suggesting highly valuable external traffic sources.
- **Organic Social** generated very small traffic volume but achieved a **100% key-event conversion rate**; however, this result is based on only a single user and has limited statistical significance.

The analysis demonstrates that smaller traffic channels often generated stronger engagement and conversion efficiency than high-volume Direct traffic.

Customer Engagement Analysis & Site structure

This section examines the performance of specific website pages during the analyzed hour to identify which content attracts the most users attention.

K

K

Karta 3

+

<

Key observations

- The **Home page** was the dominant entry point of the website, generating:
 - **97 page views**
 - **89 active users**
 - and **309 events**.
- The **New | Google Merch Shop** section was the second most visited page, indicating strong user interest in newly available products.
- Product category pages such as:
 - **Apparel**
 - **Men's / Unisex**
 - **Women's**
 - **Sale**

maintained moderate levels of user activity and browsing engagement.

- The **Men's / Unisex** section achieved relatively strong engagement efficiency, generating:
 - **6 active users**
 - and **26 events**

from only **6 page views**, suggesting highly active interactions from visitors.

- The analysis period generated no recorded revenue, indicating that users mainly focused on browsing and exploration rather than completing purchases during the selected timeframe.
- Event activity remained concentrated around the homepage and major product-category pages, highlighting their importance in customer navigation behavior.

User Path Exploration Analysis

This analysis visualizes the initial steps taken by users during this specific hour to identify immediate engagement patterns.

Wszyscy użytkownicy

Key observations

- The customer journey began with **131 session_start events**, representing all users entering the website during the selected hourly period.
- The overwhelming majority of users continued directly to the **page_view** stage with **119 occurrences**, indicating strong initial browsing activity immediately after entering the website.

- Only a very small number of users progressed toward deeper ecommerce interactions such as:
 - **view_item_list**
 - **view_cart**
- The appearance of the **non_purchasers** event confirms that some users abandoned the shopping process before reaching conversion stages.
- Cart-related interactions remained extremely limited, with only **1 recorded view_cart event**, indicating weak purchase progression during the analyzed hour.

Key Takeaway: During this hour, users showed a very linear behavior, with nearly **91%** of sessions moving directly from start to browsing pages without immediate drop-offs.

Active Users

This section evaluates user distribution across specific site paths and identifies pages that successfully convert interactions into business value during this hourly window.

Ścieżka strony i klasa ekranu		Wyświetlenia	↓ Aktywni użytkownicy	Liczba zdarzeń	Najważniejsze wydarzenia	Łączne przychody
Łącznie		485	142	1772	152	68.39 \$
1	/	114	109	386	0	0.00 \$
2	(not set)	0	32	48	0	0.00 \$
3	/shop/new	20	14	109	0	0.00 \$
4	/checkout	25	10	68	2	68.39 \$
5	/shop/apparel	24	10	123	0	0.00 \$
6	/shop/clearance	17	8	64	0	0.00 \$
7	/shop/collections/chrome-dino	7	8	30	0	0.00 \$
8	/shop/lifestyle	5	7	30	0	0.00 \$
9	/shop/lifestyle/fun-and-games	12	7	35	0	0.00 \$
10	/shop/stationery	9	7	40	0	0.00 \$

Key observations

- The **Home** page remained the primary entry point during the analyzed hour, generating the highest number of:
 - page views,
 - active users,
 - and events.
- The **New | Google Merch Shop** page attracted the second-highest number of active users, indicating continued interest in newly available products.
- Product category pages such as:
 - Apparel,
 - Men's / Unisex,

- Women's,
- and Sale

generated moderate browsing activity and user interaction.

- The **Men's / Unisex** section demonstrated relatively strong engagement efficiency, producing a high number of events relative to the number of views.
- Most users interacted primarily with browsing and category pages rather than transactional sections such as checkout or payment pages.
- No revenue was generated during the analyzed hourly period, suggesting that user activity was focused mainly on exploration and product discovery.

Number of events

This section evaluates the volume of user interactions across different pages, highlighting where the most activity occurs within a single hour.

Karta 3					
Ścieżka strony i klasa ekranu	Wyświetlenia	Aktywni użytkownicy	↓ Liczba zdarzeń	Najważniejsze wydarzenia	Łączne przychody

Key observations

- The homepage (/) generated the highest interaction activity during the analyzed hour, producing:
 - **386 events**
 - **109 active users**
 - and **114 page views**.
- The **/shop/apparel** page was the second most interactive section, generating **123 events**, indicating strong browsing interest in apparel-related products.
- The **/shop/new** page also maintained high activity levels with **109 events**, confirming continued user interest in newly available products.
- The **/checkout** page generated:
 - **68 events**

- **2 key events**
- and all recorded revenue (**\$68.39**),

making it the most important transactional page during the analyzed timeframe.

- Product-category pages such as:
 - **/shop/clearance**
 - **/shop/apparel/mens**
 - **/shop/lifestyle/bags**

also generated moderate event activity, showing ongoing product exploration behavior.

- Several pages generated relatively high event counts despite smaller numbers of active users, suggesting more intensive interaction behavior among engaged visitors.

Key observations

- **/shop/shop-by-brand/google**

achieved the highest average engagement time (**7 minutes 36 seconds**), indicating extremely strong user attention despite very low traffic volume.

- Product pages such as:

- **/product/youtube-kids-coloring-book-ggoeyoba242499**
- **/product/Google-Montauk-Navy-Unisex-Rain-Jacket-GGOEGXXX2044**

also demonstrated high engagement times, suggesting focused product exploration behavior.

- The **/shop/apparel** and **/shop/apparel/mens** sections generated:
 - relatively high page views,
 - strong event activity,
 - and engagement times exceeding **1 minute 40 seconds**,

indicating active browsing behavior within apparel-related categories.

- The product page:

Google-Montauk-Navy-Unisex-Rain-Jacket

generated **11 key events**, representing one of the strongest product-level interaction performances during the analyzed hour.

- Several pages achieved high engagement times despite very small numbers of users, suggesting highly concentrated interaction among interested visitors.
- No significant revenue was generated directly from most highly engaged pages during the selected hourly period.

Revenue for the whole day:

Key observations

- The analyzed hour generated a total product revenue of **\$38.40** from **4 purchased products**.
- The products:
 - **YouTube Double Charm Keychain**
 - **YouTube Icon Mug**

generated the highest revenue, each contributing:

- **\$11.20**
- and approximately **29.17%** of total revenue.
- The **Google Café au Lait Mug** generated:
 - **\$9.60**
 - accounting for **25%** of total revenue during the analyzed hour.
- The **YouTube Crossbody Phone Lanyard** generated:
 - **\$6.40**
 - contributing approximately **16.67%** of total revenue.
- Several products achieved purchases despite extremely low numbers of product views, indicating efficient conversion behavior among a small number of highly interested users.
- Many viewed products, particularly within the Chrome Dino product series, generated no purchases or revenue despite receiving product views.
- The analysis demonstrates that only a very limited subset of products converted successfully into purchases during the selected hourly period.

Key observations

- The **Google Montauk Navy Unisex Rain Jacket** was the most viewed product during the analyzed hour, generating:
 - **10 product views**
 - and **1 add-to-cart action**.
- Products such as:
 - **Chrome Dino Maps Tourist Accessory Pack**
 - **Google Eco Tee Black**
 - **Google rPET Olive Sunglasses**

also attracted notable browsing activity.

- Despite receiving multiple views, the majority of products generated:
 - no purchases,
 - and no direct revenue.
- The **Google Eco Tee Black** demonstrated relatively stronger shopping intent, generating:
 - **3 add-to-cart actions**

despite having only **4 product views**.

- Several viewed products achieved no cart activity at all, suggesting that users explored products without progressing toward purchase behavior.
- None of the most viewed products were ultimately purchased during the selected hourly period.
- The analysis indicates a clear gap between browsing activity and successful conversion outcomes.

Purchase funnel

Key observations

- The purchasing journey started with **109 session_start events**, representing all users entering the website during the analyzed hour.
- Only **11.2%** of users progressed from session start to the **product view** stage, indicating that most visitors left the site before exploring products.
- Users who reached product pages showed relatively strong shopping intent:
 - **58.3%** progressed to the **add-to-cart** stage.
- The transition from:

add_to_cart → begin_checkout

achieved a conversion rate of **42.9%**, indicating moderate continuation toward purchase completion.

- The final transition from:

begin_checkout → purchase

reached **66.7%**, representing the strongest conversion stage in the funnel.

- The largest drop-off occurred at the very beginning of the customer journey:

95 users (88.8%) abandoned the process before reaching product-view interactions.

- Only a very small number of users completed the full purchasing journey during the analyzed hourly period.

Customer retention

Data Limitation: Due to the analysis being focused on a single-hour snapshot, long-term retention trends and cohort behaviors cannot be fully established.

Conclusions

The hourly analysis of the Google Merchandise Store provided a detailed view of short-term customer behavior and purchasing activity within a specific one-hour timeframe.

The results showed that user activity during the analyzed period was dominated by browsing behavior rather than deep transactional engagement. Most users interacted primarily with homepage and category pages, while only a small percentage progressed toward the final purchase stages.

The analysis demonstrated that Chrome overwhelmingly dominated the ecosystem during the selected hour, generating nearly all traffic, events, key interactions, and all recorded revenue. At the same time, Safari users showed stronger engagement quality despite their significantly smaller user base. Operating-system analysis revealed clear behavioral differences between platforms: Android generated the highest traffic volume, while Macintosh users produced the strongest business value and all recorded revenue during the analyzed timeframe.

Traffic acquisition analysis showed that Direct traffic generated the largest number of users and events, but smaller channels such as Referral, Cross-network, and Organic Search achieved substantially stronger conversion efficiency and engagement quality. This indicates that high traffic volume alone does not guarantee effective ecommerce performance.

The purchase funnel revealed that the largest customer drop-off occurred at the very beginning of the journey. Nearly 89% of users abandoned the process before reaching the product-view stage. However, users who entered deeper funnel stages demonstrated relatively strong purchase intent, especially during the checkout-to-purchase transition, which achieved the highest conversion rate within the funnel.

Product analysis showed that revenue generation during the analyzed hour was concentrated around only a few products. Several products generated purchases despite very low view counts, suggesting that some users may have entered product pages directly or arrived through focused promotional traffic. At the same time, many highly viewed products failed to generate purchases, highlighting a clear difference between browsing interest and actual buying behavior.

Overall, the hourly analysis demonstrated that user engagement within a short time window is highly dynamic and strongly dependent on traffic quality, device type, browser

usage, and user intent. The results confirm that even within a single hour, Google Analytics can provide valuable insights into customer acquisition, browsing behavior, conversion efficiency, and ecommerce performance optimization opportunities.
